

Central Electricity Board

Renewable Energy Workshop

July 24, 2006

S.K.Thannoo, Non-Utility Generation Planner

Contents

- The Electricity Energy Sector
- CEB Overview
- Renewable Energy – contribution to Electricity generation
- Potential projects

24 July 2006

The Electricity Energy sector

3 Players

- The Central Government acting through the Ministry of Public Utilities
- The Central Electricity Board
- Independent Power Producers

24 July 2006

CEB Overview

- A para-statal organisation instituted by Government in 1951.
- Responsible for the control and development of electricity supplies in Mauritius
- CEB Act of 1964 gave the CEB a monopolistic position in
 - Generation, Transmission & Distribution of electrical energy island wide
- Electricity Act of 1982

24 July 2006

CEB Overview: The Production Park (2005)

CEB

- 60 MW hydro stations
- 215 MW diesel based power stations
- 75 MW gas turbines

Independent Power Producers (Existing)

- 111 MW bagasse/coal based power stations
- 39 MW Bagasse based power plants
- 30 MW Coal based power plant

Independent Power Producers (Committed)

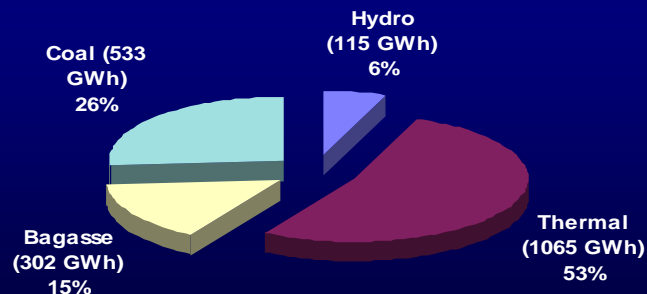

- 74 MW bagasse/coal based power station

24 July 2006

CEB Overview: 2005 Generation Statistics

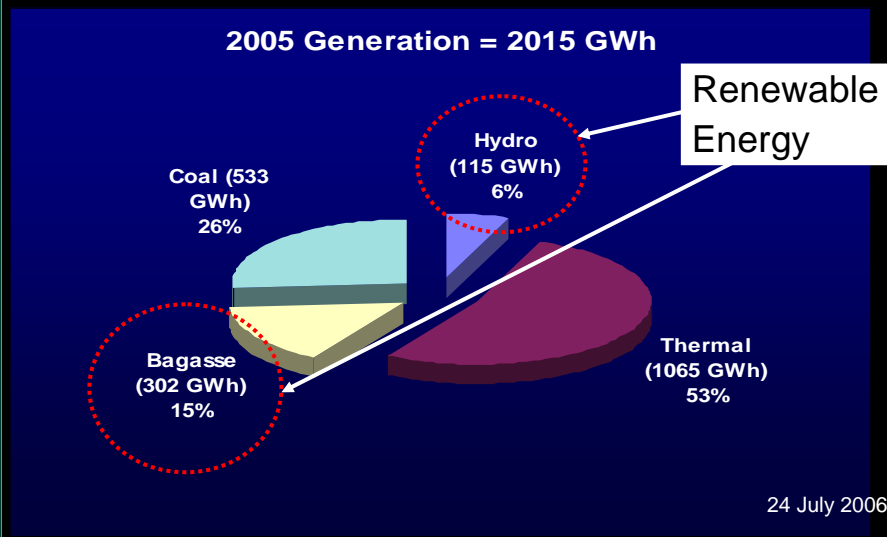

2005 Generation = 2015 GWh

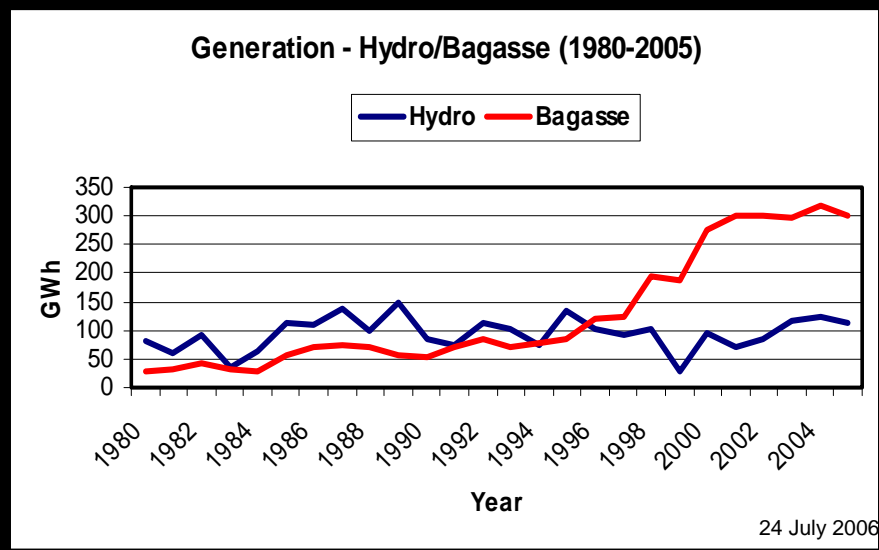

24 July 2006

CEB Overview: 2005 Generation Statistics

Renewable Energy contribution (1980-2005)

Renewable Energy (Bagasse)

Bagasse Component (Important Dates)

- 1957 – 1st Sugar Factory to export electricity , St.Antoine
- 1991 – Bagasse Energy Development Programme
 - Improve the viability of the Sugar Industry
 - Savings of foreign exchange
 - Reduce environmental pollution
- 1996/1997 – 9 Power Purchase Agreements signed
- 1998-2005 – 2 Power Purchase Agreements

24 July 2006

Renewable Energy (Bagasse)

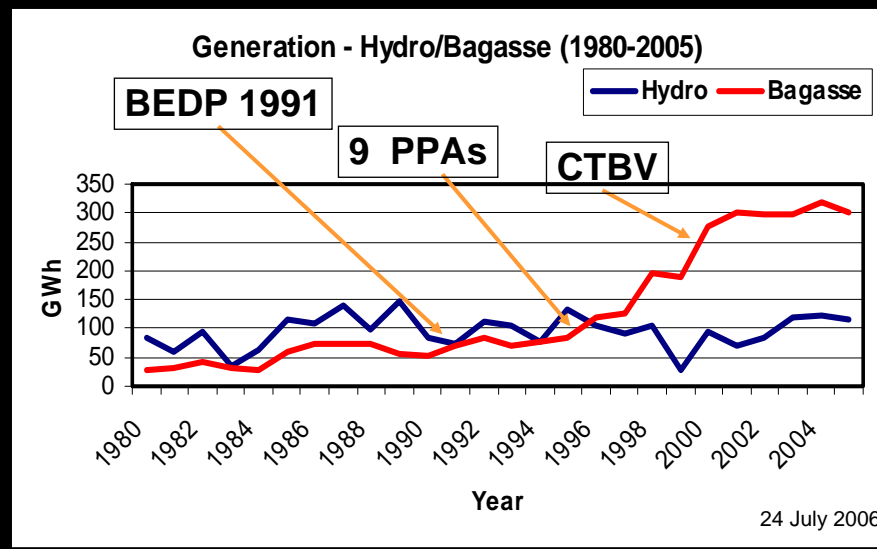

Power Purchase Agreements

- 1996/1997 (Nine)
 - Bagasse-based: Mon Loisir, Mon Desert Alma, Medine, Riche en Eau, Mon Tresor Mon Desert, Savannah, Union St.Aubin
 - Coal/Bagasse based: FUEL, Beau Champ
- 1998/2005
 - Coal/Bagasse – CTBV (1998), CTSav(2005)

24 July 2006

Renewable Energy Bagasse(1980-2005)

Renewable Energy (Bagasse)

Expected energy purchases (bagasse-based)
with the commissioning of CTSav (2007)

- 300 GWh (2005) to 420 GWh (2007)

24 July 2006

Renewable Energy (Hydro)

Hydro potential already maximised

- Average annual generation – 100 GWh

Installed capacity

- 60 MW (8 Power Stations)
 - Champagne (1984), Ferney (1971), Tamarind Falls (1903), Le Val (1961), La Ferme (1959), Redit (1906), Cascade Cecile (1963), Magenta (1960)

24 July 2006

Renewable Energy Hydro (1980-2005)

Renewable Energy (Wind)

Contribution to generation

- Mauritius – Nil (No wind park exists)
- Rodrigues – 0.44 GWh (1.5 % of total energy generated)

History

- Wind Potential established by American firm Batelle under UNDP Programme – 1983 to 1987
- Pilot project – 100 kW at Grand Bassin, 4 x 30 kW at Rodrigues
- Wind Turbine removed from service in 1990 (Grand Bassin – spare parts problem), 1995 (Rodrigues – not equipped with tilting ability)
- 3 x 60 kW Wind Turbines installed in Rodrigues in December 2003 with tilting ability

24 July 2006

Renewable Energy (Wind)

Lessons learned

- Cyclones are major a major problem (Wind gusts of the order of 300 km/h)

Future projects

- Discussions on going with one project promoter for the installation of a 25 MW Wind Farm at Bigara

24 July 2006

Renewable Energy (Wind)

Future of Wind Energy dependent on the following

- Incentives from the Government to mitigate the high costs of installation of Wind Turbines

24 July 2006

Renewable Energy (Wind)

Indian Experience

- Wind energy started in 1983-1984, Demonstration projects in 1985
- India ranks 4th behind USA, Spain & Germany

Incentives provided by Indian Government (not limited to the following)

- Direct taxes
 - accelerated depreciation at 80% on investment in the first year of operation attracted profit making companies
- Tax holiday
- Concessions in excise and customs duty

24 July 2006

Renewable Energy

Potential projects

- **Micro turbines**
 - Small turbines of about 0.1 MW being considered
- **Waste-to-Energy projects**
 - Considered by the Government (Power plant size of the order of 20 MW)
- **Solar**
 - Best suited for off-grid application
- **Tidal**
 - Still at development stage
 - Enormous potential

24 July 2006

Next Steps

Concerns requiring attention

1. Increasing price of petroleum products
2. Depleting coal reserves
3. Energy Security
4. Need to address reduction of Green House Gas emission, a tradable commodity that can earn additional revenue to the any project under the Clean Development Mechanism (CDM).
5. Need to have policies in place to attract investors

24 July 2006

Central Electricity Board

THANK YOU

24 July 2006
